Contents

1 Introduction **1**

1.1 Important abbreviations 1
1.2 Erk signalling and gene expression noise 1
1.3 Signalling pathways are perturbed in cancer 5
1.4 Robustness through redundancy and systems control 6
1.5 The regulation of Erk activity 8
1.6 Systems biology approach to investigate robustness 11
1.7 Outline of this thesis 14

2 Colon cancer cell lines tolerate significant reduction of Erk1/2 **15**

2.1 Introduction 15
2.2 Predicted linear relation of protein level and activity 16
2.3 PhosphoErk levels depend only weakly on total Erk levels 17
2.4 Three possible mechanisms for robustness 18
2.5 Feedback via c-Raf mediates robustness 22
2.6 Modelling shows that the feedback is amplifying 25
2.7 Strong negative feedback impairs inhibitor action 28
2.8 Discussion 31

3 Robustness of signalling against Erk overexpression in Hek293 cells **33**

3.1 Introduction 33
3.2 Reduced Erk activity at high Erk expression levels 34
3.3 Hek293 cells as experimental model for Erk overexpression . . . 46
3.4 Increased phosphoErk amplitude in Erk overexpressing cells . . 53
3.5 Sequestration and feedbacks can explain the kinetics 63
3.6 Signal attenuation at the level of Erk targets 76
3.7 Discussion 80

4 Conclusion **93**

5 Appendix **97**

A Cells and constructs **99**

B Semiquantitative Immunoblots **103**
B.1 Protocol 103
B.2 Long time series of phosphoErk after treatment with EGF . . . 104

C Bioplex Assay **105**
C.1 The measurement principle 105
C.2 Protocol and data processing 105
C.3 Direct phosphorylation of p70S6K by Erk 108
C.4 The MAPK pathway response at 20x Erk2 overexpression 108

D Isoelectric Focusing **111**

E Flow Cytometry **113**
E.1 Protocol and data processing 113
E.2 The principle of fluorescence compensation 115
E.3 Hek293 cells kept in 10% FCS have low levels of phosphoErk . . 117

F RT-PCR **119**

G Quantification of impedance-based growth assays **121**
G.1 Proliferation measurements using the xCELLigence technology . 121
G.2 Model fits of Hek293 growth curves 124

H Additional material on modelling for chapter 2 **127**
H.1 From partial and total derivatives to response coefficients 127
H.2 Modelling inhibition of Mek 128

I Additional material on modelling for chapter 3 **131**
I.1 The dual phosphorylation cycle model 131
I.2 Implicit derivation of the pErk limit 132
I.3 Steady state of a simplified dual phosphorylation cycle model . . 134
I.4 Models for the differential transient phosphoErk response 137
I.5 Parameter estimation 139
I.6 Simplistic Erk activation model with feedbacks 140
I.7 Quasi steady state entails non-identifiable parameters 140

J Abbreviations **143**

Bibliography **147**

Acknowledgements **167**
