<b>List of Tables</b>	<b>IX</b>
<b>List of Figures</b>	<b>XI</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Background . . . . .	1
1.2 Multilevel converter technology . . . . .	2
1.3 Novel Modular Multilevel Cascaded Converter (MMCC) . . . . .	4
1.3.1 Modular Multilevel Converter (MMC) . . . . .	4
1.3.2 Structural development of MMCC . . . . .	5
1.4 Motivation . . . . .	8
1.5 Objectives and outlines . . . . .	10
1.5.1 Objectives . . . . .	10
1.5.2 Outlines . . . . .	12
<b>I Unified framework of modeling and analysis for MMCC</b>	<b>15</b>
<b>2 Topological analysis of MMCC</b>	<b>17</b>
2.1 Basic concepts of MMCC . . . . .	17
2.1.1 MMCC fundamental cell - Submodule . . . . .	18
2.1.2 Basic component - Branch . . . . .	20
2.1.3 MMCC topology, structure and system . . . . .	22
2.2 Classic MMCC classification methods . . . . .	23
2.2.1 Classification based on energy conversion types and 3-phase connections . . . . .	23
2.2.2 Comments on both methods . . . . .	24
2.3 Graph-based analysis - A formal description . . . . .	25
2.3.1 MMCC description based on graph theory . . . . .	25
2.3.2 Bipartite-graph-based MMCCs (Group $\mathcal{K}_{M,N}$ ) . . . . .	26
2.3.3 Cycle-graph-based MMCCs (Group $\mathcal{C}_{M+N}$ ) . . . . .	27
2.3.4 Evaluation of graph-based classification . . . . .	28

2.3.5	Branch grouping . . . . .	29
2.4	Summary . . . . .	30
<b>3</b>	<b>Unified framework for modeling and analysis of MMCC systems</b>	<b>31</b>
3.1	MMCC continuous equivalent circuit . . . . .	31
3.1.1	Branch equivalent circuit . . . . .	32
3.1.2	MMCC model integrating with current and energy aspects . . . . .	34
3.1.3	Unified modeling framework . . . . .	35
3.2	Current dynamic modeling of MMCC system . . . . .	35
3.2.1	Branch current modeling . . . . .	37
3.2.2	External current modeling . . . . .	37
3.2.3	Internal current modeling . . . . .	37
3.2.4	External current modeling in $dq$ frames . . . . .	39
3.2.5	Example of current model development for MMCC- $\mathcal{K}_{3,3}$ . . . . .	41
3.3	MMCC energy dynamic modeling . . . . .	46
3.3.1	External power modeling . . . . .	46
3.3.2	Branch power expression . . . . .	47
3.3.3	Internal branch energy balancing . . . . .	49
3.3.4	Example of IBEB design for MMCC- $\mathcal{K}_{3,3}$ . . . . .	53
3.4	Integrated current-energy MMCC model . . . . .	57
3.5	Summary . . . . .	58
<b>4</b>	<b>Multivariable control methods for MMCC</b>	<b>59</b>
4.1	Control design using state-space method . . . . .	60
4.1.1	System discretization . . . . .	60
4.1.2	Full state feedback control . . . . .	61
4.1.3	Estimator design . . . . .	62
4.1.4	Combined control law and estimator . . . . .	63
4.1.5	Introduction of the reference input for MMCC . . . . .	63
4.1.6	External disturbance rejection . . . . .	64
4.2	Linear Quadratic Regulator . . . . .	65
4.2.1	Time-varying multivariable optimal control . . . . .	65
4.2.2	LQR optimal control . . . . .	66
4.3	Nonlinear feedback control . . . . .	67
4.3.1	SDRE approach for nonlinear control design . . . . .	67
4.3.2	Solution for SDRE . . . . .	68
4.4	Periodic discrete LQR . . . . .	70
4.4.1	Periodic modeling with the hyper-period . . . . .	70
4.4.2	Discretization of periodic LTV systems . . . . .	71
4.4.3	Solution scheme for PDLQR . . . . .	72

4.4.4	Introduction of the reference input for periodic systems . . . . .	73
4.4.5	Feedforward rejection of disturbances for periodic systems . . . . .	73
4.4.6	Complete design of PDLQR . . . . .	74
4.5	Modulation techniques for MMCC . . . . .	75
4.6	Summary . . . . .	76
<b>5</b>	<b>Case studies</b>	<b>77</b>
5.1	MMC-based MVDC system . . . . .	77
5.1.1	System configuration and parameters . . . . .	77
5.1.2	Integrated modeling and cascaded PI control structure . . . . .	78
5.1.3	Simulation results . . . . .	82
5.2	MmSTATCOM for reactive power compensation . . . . .	83
5.2.1	Application scenarios and system parameters . . . . .	83
5.2.2	Operation requirement . . . . .	83
5.2.3	Generalized modeling for MMCC- $\mathcal{C}_3$ . . . . .	85
5.2.4	Multivariable controller design . . . . .	87
5.2.5	Simulation verification . . . . .	88
5.3	M3C for active power transmission . . . . .	95
5.3.1	M3C-based active power transmission system . . . . .	95
5.3.2	Simulation verification . . . . .	97
5.4	Summary . . . . .	102
<b>6</b>	<b>Hardware setup of down-scaled MMCC system</b>	<b>103</b>
6.1	Overview of buck converter . . . . .	103
6.2	Three-phase MMC structure . . . . .	105
6.2.1	MMC submodule . . . . .	107
6.2.2	Measurement board . . . . .	109
6.3	Digital processor system . . . . .	109
6.3.1	Upper-layered control structure . . . . .	110
6.3.2	Lower-layered control structure . . . . .	110
6.4	Experimental results . . . . .	111
6.4.1	Steady-state operation . . . . .	112
6.4.2	Step response . . . . .	112
6.5	Summary . . . . .	115

<b>II</b>	<b>MMCC direct control method</b>	<b>117</b>
<b>7</b>	<b>Modeling and formulation of direct control of MMCCs</b>	<b>119</b>
7.1	Direct switched model of MMCC . . . . .	119
7.1.1	Model development . . . . .	119
7.1.2	Analysis at steady state operating point . . . . .	124
7.1.3	Discrete mathematical model . . . . .	125
7.2	Problem formulation of direct control . . . . .	126
7.2.1	Principle of model-based direct control . . . . .	126
7.2.2	Formulation of subproblems in direct control . . . . .	127
7.2.3	Cost function integration . . . . .	129
7.2.4	Analysis of switching redundancy in MMCC . . . . .	131
7.3	Summary . . . . .	132
<b>8</b>	<b>Solution schemes of direct control method</b>	<b>133</b>
8.1	Tasks and specification of MMCC direct control . . . . .	133
8.2	Implicit methods . . . . .	134
8.2.1	Exhaustive search . . . . .	135
8.2.2	Dynamic programming . . . . .	135
8.2.3	Other enumerative methods . . . . .	136
8.3	Control set reduction . . . . .	137
8.3.1	Principle of control set reduction . . . . .	137
8.3.2	Fast RCS method . . . . .	139
8.3.3	RCS methods with extended prediction horizon . . . . .	141
8.4	Event-based direct control method . . . . .	142
8.4.1	Voltage variation analysis of branch submodules . . . . .	142
8.4.2	Submodule voltage prediction . . . . .	144
8.4.3	Control configuration . . . . .	145
8.4.4	Comparison to voltage-sorting method . . . . .	151
8.4.5	Extension of direct control method . . . . .	152
8.5	Summary . . . . .	154
<b>9</b>	<b>Simulation and experimental verification of direct control</b>	<b>155</b>
9.1	Simulation verification . . . . .	155
9.1.1	Simulation setup and parameters . . . . .	155
9.1.2	Direct control with exhaustive search . . . . .	156
9.1.3	Direct control with fast RCS . . . . .	158
9.1.4	Event-based direct control . . . . .	160
9.1.5	Voltage-sorting method . . . . .	160
9.1.6	Method comparison and time complex analysis . . . . .	162

---

9.2	Experimental verification . . . . .	164
9.2.1	Experimental results of fast RCS . . . . .	164
9.2.2	Experimental results of event-based method . . . . .	165
9.2.3	Experimental results of voltage-sorting method . . . . .	166
9.3	Summary . . . . .	166
<b>10</b>	<b>Conclusion</b>	<b>171</b>
	<b>Appendices</b>	<b>173</b>
<b>A</b>	<b>Relation between branch energy and branch submodule voltages</b>	<b>175</b>
<b>B</b>	<b>Circulating currents in MMCC</b>	<b>177</b>
