List of Figures **XI**

List of Tables **XV**

List of Symbols **XVII**

Acronyms **XIX**

1. Introduction **1**

1.1. Motivation 1
1.2. Objectives 4
1.3. Related Work 5
1.3.1. Current Operation Strategies 6
1.3.2. Harmonic Interaction Analysis 8
1.4. Outline and Contribution 10
1.5. Publications 12

2. Foundation of Delta-connected CHB Multilevel Converter **13**

2.1. Voltage Source Converters 13
2.1.1. Classification 13
2.1.2. Applications 18
2.1.3. Choice of Delta-connected CHB as Shunt APF 23
2.2. Non-ideal Power Supplies 24
2.2.1. Voltage Disturbances in Electric Power Systems 24
2.2.2. General Description of Periodic Voltages in *abc* Frame 26
2.3. Challenges of Operational Issues of Delta-connected CHB as Shunt APF under Non-ideal Power Supplies 28

3. Optimal Current Operation Strategy **31**
3.1. Definitions for Electric Quantity Measurement 31
3.2. Recommended Practice for Electric Power Systems 33
3.3. Operation Principle of Delta-connected CHB 35
3.4. The Proposed Strategy for Desired Terminal Currents and Circulating Current Calculation 39
3.4.1. Harmonic-based Distortion Analysis in *dq* Frame 40
3.4.2. Optimization Problem Formulation 44
3.4.3. Combination of Objective Function and Constraints 49
3.4.4. Solution of the Optimization Problem via Sequential Convex Programming 50
3.5. Sequential Convex Programming and Its Convergence 52
3.6. Block Diagram for Strategy Validation 54
3.6.1. Harmonic Detection Method 55
3.6.2. Modelling and Controller Design 56
3.6.3. Finite Horizon Discrete Time LQR via Dynamic Programming 59
3.7. Validation via Time-Domain Simulation 61
3.7.1. Case A 66
3.7.2. Case B 68
3.7.3. Case C 70
3.7.4. Case D 71
3.8. Discussion 73

4. Harmonic Interaction Analysis **83**
4.1. Necessity of Harmonic Interaction Analysis 83
4.2. Time-varying Model and Properties 86
4.3. Observations of Power Flow and Branch Voltage Model 90
4.3.1. Foundation 90
4.3.2. Observations of Power Flow Model 91
4.3.3. Observations of Branch Voltage Model 95
4.4. Derivation of Time-invariant Representation for Power Flow 95
4.4.1. Time-invariant Representation for dc Component of Power Flow 96

4.4.2. Time-invariant Representation for Oscillating Component of Power Flow . . . 96
4.5. Utilisation of Harmonic Interaction Analysis . . . 98
4.5.1. Time-invariant Model Based on Harmonic Interaction Analysis 98
4.5.2. Determination of Control Variables . . . 99
4.6. Validation via Time-Domain Simulation . . . 103
4.6.1. Case A . . . 106
4.6.2. Case B . . . 108
4.6.3. Case C . . . 108
4.6.4. Case D . . . 110
4.6.5. Case E . . . 110
4.7. Discussion . . . 111

5. Summary and Outlook **123**

6. Zusammenfassung **127**

A. Supplementary Materials **131**
A.1. Power Component Calculation (Chapter 3) . . . 131
A.2. Some Details of Eq. (4.26) . . . 134
A.3. Harmonic Sequence Coupling . . . 139

Bibliography **141**
